

ART VAN DE RIET

Systems Engineer | Automation & Change Management

Imperial, MO • 314-574-8894 • Arthur.vanderiet@gmail.com • [linkedin.com/in/art-van-de-riet-75188155](https://www.linkedin.com/in/art-van-de-riet-75188155)

PROFESSIONAL SUMMARY

Results-driven systems engineer with 10+ years of experience spanning network operations, service delivery, and change management. Specializes in building automation and reporting solutions with Python, the Microsoft Power Platform, and SQL that eliminate process bottlenecks, prevent service-impacting outages, and give technical teams faster, data-driven decisions. Recognized for delivering production-ready tools, high-impact executive reporting, and process improvements that protect large-scale networks.

CORE SKILLS

Automation & Development: Python • Power Automate • Power Apps • VBA / Excel Macros • C# / .NET • Azure Functions • Microsoft Graph API • REST APIs • SharePoint • Git • CI/CD & GitLab Runners • pytest

Cloud & AWS: AWS • EC2 • S3 • VPC • IAM • Lambda • RDS • DynamoDB • Route 53 • CloudFront • Auto Scaling • ELB • SNS • SQS • CloudWatch • CloudFormation

Data & Reporting: SQL • T-SQL • pandas • openpyxl • ETL / Data Pipelines • Data Modeling • CMDB • Power BI • Tableau • Microsoft Excel & Access • Executive Reporting

Operations & Process: ITIL Framework • Change Management • Incident Management • Problem Management • Root Cause Analysis • Network Surveillance • Method of Procedure (MOP) • Compliance & Risk

Platforms & Tools: Microsoft 365 • Azure • SharePoint Online • Visio • GitLab • BMC Remedy • Jira • Netcool • PowerPoint

PROFESSIONAL EXPERIENCE

Systems Engineer II — Automation & Network Intelligence

Apr 2026 – Present

Spectrum (Charter Communications) | Town and Country, MO

- Architected and shipped the CM Hub Intel Tool, an end-to-end network intelligence platform that consolidates 3,916 hub records from 6 source systems into a single searchable CMDB used daily by NOC and Change Management teams.
- Wrote T-SQL against the Remedy (NOC_APPS) database to pull hub, node, and device (CMTS/OLT/RDM) data, then built a Python (pandas / openpyxl) pipeline that merges optical transport, single-threaded, and backbone sources into one dataset.
- Developed a two-pass matching engine (exact + vendor-locked fuzzy matching) that links 100+ Visio transport maps to hubs at a 96% match rate, and parsed Visio .vsdx XML to flag 167 backbone (BBoC) hubs and 108 single-threaded sites.
- Built a C# / .NET Microsoft Graph API updater with certificate-based auth, batched parallel writes, and exponential-backoff retry that replaced a 2-hour Power Automate flow with a 5–10 minute upload — cutting the full update cycle from ~2.5 hours to ~20 minutes.
- Delivered the tool through a Power Apps front end on a SharePoint list, added a serverless C# Azure Function for automated Visio splitting, and set up GitLab CI/CD with property-based (Hypothesis) tests to protect data-integrity invariants.

Change Analyst II — Change Management & Automation

2018 – Apr 2026

Spectrum (Charter Communications) | Town and Country, MO

- Review 1,000+ planned maintenance changes annually to validate scope, verify device relationships and impacts, and prevent self-induced subscriber outages.
- Approved 25% of all Inside Plant changes in 2022 — the company's largest organization — with 0 administrative errors and 0 break/fix incidents on approved tickets.

- Received the “Above and Beyond” award (Q3 2022) for rebuilding and automating department-wide daily, monthly, and yearly reporting.
- Build and present monthly executive reporting and year-over-year trend analysis that guides leadership planning and improves department efficiency.
- Designed a standardized messaging application (VBA/Excel) that streamlined maintenance communications and cut email preparation time.
- Authored method-of-procedure templates and process documentation across 7 verticals, improving CRQ accuracy and reducing escalations with Inside Plant leadership.

Associate Network Operations

2016 – 2018

Spectrum (Charter Communications) | Town and Country, MO

- Monitored network events with Netcool and BMC Remedy to triage, escalate, and resolve critical outages across VoIP, HSD, and Video services.
- Led incident management conference calls, coordinated multi-team responses, and delegated efforts to reduce average resolution time.
- Proactively investigated alarms to minimize customer impact and helped launch the new Remedy ticketing platform, training peers on adoption.

Service Delivery Coordinator

2015 – 2016

Spectrum (Charter Communications) | St. Louis, MO

- Resolved provisioning and billing errors in CSG systems, specializing in E911 and number porting accuracy.
- Identified and corrected recurring order-entry issues, preventing thousands in potential billing losses.

Telephone Service Advisor I / II / Sr. Advisor

2013 – 2015

Spectrum (Charter Communications) | St. Louis, MO

- Performed complex troubleshooting across phone, internet, and cable services while consistently meeting leadership performance metrics.
- Served as floor support for the supervisor and mentored new hires, fostering a collaborative, high-performing team environment.

KEY PROJECTS

CM Hub Intel Tool — Python, pandas, Power Apps, Power Automate, SharePoint, C# / Azure Functions, GitLab CI/CD

- Built an end-to-end network intelligence platform that consolidates 3,916 hub records from 6 source systems, giving NOC and Change Management teams instant search access to transport maps, backbone dependencies, and risk indicators.
- Engineered a Python pipeline that parses 100+ Visio network maps and links them to hubs at a 96% match rate, replacing manual searches through a 100+ page PDF and cutting hub lookups from minutes to seconds.
- Flagged 167 backbone (BBoC) hubs and 108 single-threaded sites with automated warning banners, surfacing outage blast radius at the point of CRQ review to prevent service-impacting changes.
- Delivered the tool through a Power Apps front end backed by a SharePoint list, with a C# Azure Function automating Visio map splitting and a GitLab CI/CD pipeline.

STL Hub 72-Hour Buffer Analyzer — Python, pandas, Excel, OneDrive

- Built a Python tool that monitors 20 St. Louis hub locations to detect and prevent maintenance conflicts using a 72-hour buffer rule.
- Auto-detects Excel files from OneDrive and generates color-coded reports flagging buffer violations, active/expired buffers, and compliant tasks.
- Groups conflicting work into Multi-Task Resolution (MTR) groups and produces automated reschedule recommendations, with batch and drag-and-drop launchers.

Conflict Assessment & Notification System — Power Automate, Power Apps, SharePoint, Excel

- Developed an automated workflow that detects CRQs with overlapping transport paths and stores grouped conflict records with dynamic Conflict IDs.

- Delivered a Power Apps dashboard letting stakeholders view grouped records, mark resolutions, and track live status, with automated email alerts to coordinators.

Transport Lookup Application — *SharePoint, Power Automate, Access*

- Designed a SharePoint-integrated lookup system that identifies CRQs referencing the same transport map, enabling technicians to self-serve conflict insights and cutting turnaround time.

Centralized Communication Application — *VBA, Excel*

- Created a centralized tool that standardized maintenance communication verbiage, improving consistency and reducing time spent on outbound notifications.

EDUCATION & CERTIFICATIONS

Associate of Applied Science, Information Technology & Computer Network Systems

ITT Technical Institute, Arnold, MO · GPA 3.2 · 2011–2013

- Leadership Development: Charter Communications Technical Leadership Development Program (TLDP) — selected participant, 2026 cohort (8-month cross-functional program: mentoring, DDI leadership modules, and an executive presentation to senior leadership).
- SCTE Certifications: DOCSIS Engineering Professional, Broadband Telecommunications Specialist, Understanding Cable Technology.
- AWS Training: AWS Cloud Quest — Cloud Practitioner (completed); Solutions Architect (in progress).
- Professional Development (Udemy): Python (Beginner to Advanced), SQL, Microsoft Access (Beginner to Advanced), Tableau Data Analytics, Analytics Engineering Bootcamp.
